

Kisan Drishti Disease Report

Date: 2026-01-30 16:39:50

Detected Disease: mosaic_disease1

Confidence: 57.61%

Description:

Cassava Mosaic Disease (CMD) is caused by a complex of begomoviruses and results in characteristic mosaic patterns on leaves and stunted growth.

Recommended Treatments:

- Plant resistant cassava varieties.
- Use healthy stem cuttings for planting.
- Remove and burn infected plants especially at early stages.
- Control the whitefly vector (*Bemisia tabaci*) if possible.
